S5 Fig. Expression of hif-1α mRNA levels in croaker brains exposed to laboratory hypoxia. Effects of 7-day laboratory exposure to normoxia control (dissolved oxygen, DO: <6 mg l⁻¹, white circles), hypoxia (HYP, DO: 1.7 mg l⁻¹, black circles) (A) and recovery period on relative hif-1α (B) mRNA levels in croaker brain. The thick vertical lines represent mean values, N=7-8.
